AS-P SERIES ACTIVE SUBWOOFERS

The AS-P SERIES active subwoofers from athena TECHNOLOGIES®

AUDITION:

Every Audio Video system needs a subwoofer to truly realize the benefits of today's 5, 6 and 7 channel digital home theater systems. The AUDITION series subwoofers feature built in high powered amplifiers, injection molded woofers, and solid MDF (Medium Density Fiberboard) speaker enclosures. One listen, and you'll quickly learn the performance capabilities of AUDITION. Match the AS-P400 with a complete AUDITION speaker package, and you'll never listen to music or movies the same way again.

EFFORTLESS:

The AUDITION Series AS-P300 and AS-P400 subwoofers combine exceptional performance, with modern cosmetics, providing a powerful, reliable solution to your subwoofer needs. Designed and manufactured in athena's 170,000 sq ft factory, the AS-P400 and AS-P300 features the athena TECHNOLOGIES® exclusive SCT system. System Creation Technology, or SCT is athena's answer to the sometimes complicated set up procedure of home theater systems.

The SCT frequency dial (A) on the sub's front panel is marked with the model numbers of the AUDITION series speakers – match the dial to the model number of speakers you own, and turn up the volume – you're done! Set up couldn't be easier with flexible, well marked connectors (B), ergonomic front mounted controls, and front mounted drivers and ports for easier placement in your room. Truly outstanding in value, the AUDITION series subwoofers are a must for any home theater system.
