

## To Connect a pair of athena TECHNOLOGIES™ Speakers

- 1) Using standard 2 conductor high quality speaker cable, connect a cable from the left speaker output of the Receiver or Amplifier, to the Binding Post Connectors of the left speaker, ensuring the positive (red) and negative (black) connectors are matched.
- 2) Next, connect a cable from the right speaker output of the Receiver or Amplifier, to the Binding Post Connectors of the right speaker, ensuring the positive (red) and negative (black) connectors are matched.
- 3) This applies to all models of **athena** TECHNOLOGIES™ speakers S1, S2, S3, and C1. This also applies to front channel, or rear channel usage. The diagram shows the speakers connected to the front channel outputs of the amplifier. For rear channel applications, connect to the rear channel amplifier outputs.
